

Simona Perotto received her Ph.D. in Computational Mathematics and Operational Research at Università degli Studi di Milano in 1999. She was postdoc in Scientific Computing and Mathematical Modeling at the EPFL, Lausanne (1999-2000), and was appointed as Assistant (2001) and then Associate Professor (2010) in Numerical Analysis at the Department of Mathematics, Politecnico di Milano, Italy. Her main research fields are anisotropic mesh adaptation and adaptive model reduction for the numerical approximation of PDEs. She has been Co-PI of the project FIRB2008 “Advanced Statistical and Numerical Methods for the Analysis of High Dimensional Functional Data in Life Sciences and Engineering”. She is currently Co-PI of the NSF Project, DMS 1419060 “Hierarchical Model Reduction Techniques for Incompressible Fluid-Dynamics and Fluid-Structure Interaction Problems”.
