**Key words:** Reservoir Simulation, Alternative Formulation, Highly Heterogeneous and Anisotropic Media, Unstructured Mesh Discretization.

### ABSTRACT

This mini-symposium is dedicated to the discussion of recent developments and applications in the field of Numerical Simulation of Petroleum Reservoirs and related disciplines, including new gridding and numerical formulations. The goal is to bring together researchers, students and professionals in the field of Petroleum Reservoir Simulation and related areas. The scope of the mini-symposium ranges from the mathematical and computational methods to the modeling and simulation of *challenging* applications in petroleum reservoir simulation.
