

Biographical Sketch

Dr. **YONG YUAN** is currently a professor from Tongji University, Shanghai, China. He earned all his degrees from universities and institute in China by 1991. After he was awarded the Degree of Doctor on structural engineering from Tongji University he got the position of faculty member in the Division of Structural Mechanics, Department of Building Engineering. His professorship was offered by Tongji University in 1996. He had served for the university more than two decades.

His researches mostly focus on the computation and experiment in Civil Engineering. Currently, his research interests are the dynamical analysis of underground structures under seismic and blasting actions, multi-field simulation of concrete structures and underground spaces, as well as multi-scale model of structural concrete. As a professional engineer Dr. Yuan also cares about the large-scale computation in structural engineering.
