

Prof. Dr.rer.nat. Ernst Rank, born 1954 in Traunstein, Germany, studied mathematics and physics at the Ludwig-Maximilians-Universität München from 1974 to 1980. In 1985 he obtained his doctoral degree from the Faculty for Civil Engineering and Geodesy of Technische Universität München, before he was DAAD-fellow until 1986 at the University of Maryland, College Park, USA. From 1987 to 1990 he was senior scientist at the Corporate Research and Technology of SIEMENS AG in Munich, where he worked on simulation techniques for semiconductor process technology. In 1990 he was appointed associate professor for *Numerical Methods and Information Science in Civil Engineering* at the University of Dortmund. Since 1997 he holds the chair for *Bauinformatik (Computational Engineering in Civil and Environmental Sciences)* of the Technische Universität München. His major areas of research have been adaptive Finite Element and Boundary Element methods, high order FEM for linear and nonlinear problems in structural mechanics, Lattice-Boltzmann methods, multi-physics problems and modelling of geometry, products and processes in civil engineering. From 2002 to 2007 he was First Vice President of TUM. Since 2006 he is also Founding Director of the *International Graduate School of Science and Engineering* at the Technische Universität München.
